

Weekly Progress Report

Name: Shrutika Bhimashankar Patane

Domain: Python Intern

Date of submission: 28/03/2026

Week Ending: 03

I. Overview:

This week, the primary focus was on enhancing the existing Python Quiz Game application and exploring advanced features of the USC_TIA system. Efforts were directed towards improving application functionality, implementing dynamic behavior, and initiating graphical user interface (GUI) development. Additionally, emphasis was placed on strengthening Python programming skills through practical implementation and continuous learning.

II. Achievements:

1. USC_TIA Progress

- Explored advanced features and functionalities of USC_TIA.
 - Gained better understanding of system workflow and integration processes.
 - Participated in discussions and practical usage scenarios of USC_TIA.
-

2. Python Project Contributions:

Name of the Project: Quiz Game

- Enhanced the quiz application by implementing random question selection.
 - Improved scoring system by adding percentage calculation.
 - Strengthened input validation to handle incorrect user inputs effectively.
 - Started development of GUI-based quiz application using Tkinter.
 - Refactored code using functions for better structure and readability.
-

3. Learning Python:

- Improved understanding of advanced Python concepts.
 - Gained practical knowledge of:
 - o Functions and Modular Programming
 - o Random Module
 - o Basic GUI Development (Tkinter)
 - Applied Python programming skills to build more interactive applications.
-

III. Challenges:

1. GUI Development

- Faced difficulty in designing layouts and handling events in Tkinter.
- Managing alignment and responsiveness of GUI components was challenging.

Approach to Solution:

Practiced small GUI programs, referred to tutorials, and experimented with layout managers like pack and grid.

2. Randomization Logic

- Encountered issues with repeated or skipped questions during random selection.

Approach To Solution:

Used appropriate random functions and ensured proper indexing and tracking of displayed questions.

IV. Learning Resources:

1. USC_TIA Documentation

- Continued referring to official documentation for advanced features.
 - Explored tutorials to understand real-world applications of USC_TIA.
-

2. Python Learning Resources

- Studied Tkinter GUI development through online tutorials.
- Practiced programs related to randomization and functions.
- Engaged in coding exercises to improve logical thinking and debugging skills.

V. Next Week's Goals:

1. USC_TIA Enhancement

- Strengthen understanding of advanced USC_TIA features.
- Apply knowledge in practical tasks and contribute to system improvements.

2. Python Project Development

- Complete GUI-based Quiz Game application.
- Add advanced features such as timer and score storage.
- Improve user interface design and overall user experience.

VI. Additional Comments:

This week marked significant progress in enhancing both technical skills and project functionality. The introduction of GUI development and dynamic features provided valuable hands-on experience. Continuous learning and practical implementation are helping in building confidence and improving overall programming capabilities.
